LOOKING BEYOND...

DIRECTOR, HUMAN RESOURCES
SHELL NIGERIA EXPLORATION AND PRODUCTION COMPANY (SNEPCO)
INTRODUCTION
INTRODUCTION

- Efforts to reduce work-related injuries.
  - For example, The Life Saving Rules were launched in 2009; regarded as one of the world's most successful Oil and Gas safety campaigns.
- Yet, incidents continue to occur in our operations.
- Goal Zero still seems unattainable.
IMPLICATIONS FOR SAFETY PROFESSIONALS

- Written rules, standards and procedures while important and necessary, are insufficient.

- Improvements in Safety performance requires focus on behaviours, culture and leadership.

- Safety professionals need to demonstrate an ability to create the right culture, inspire supporting behaviours and unlock leadership.

- To earn a seat at ‘the table’, skill set required for Safety Professionals extends beyond technical expertise; to soft skills such as:
  - Business Partnering
  - Change Management
  - Facilitation and Intervention
  - Data Analytics etc.
WHAT’S NEXT?

- Continuous self-development.
- Mindset Shift – culture, behaviours and leadership are integral elements of frontline barriers.
- Contractor Capability Building.
- Deepen partnership with Human Resources Managers.

People are the greatest assets for their families as well
THANK YOU
